

Ducting / Ventilation Industry

The **First Choice** Globally of All Industrial Fabric Welding Solutions

Miller Weldmaster – Heat-Sealing Equipment For the Production of Ducting and Ventilation

Miller Weldmaster manufactures a variety of equipment for the production of ducting/ventilation. Miller will design a completely automated machine to fit your specific ducting / ventilation production needs. **Visit www.weldmaster.com and pick your industry for more ducting/ventilation production equipment, and watch videos of these systems.**

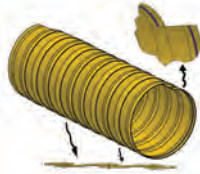

FX-100™

For the Manufacturing of Ducting Tubes

The FX-100™ is specifically designed to weld Flexible reinforced ducting or tubing. This machine will weld reinforced tubes from a 2-inch diameter to a 48-inch diameter. The FX-100™ can also easily add a wear strip to the outside. All operations run simultaneous and are automated.

FX-100™ Seal Types:

The FX-100™ is designed to weld flexible ducting in a fully automated production system!

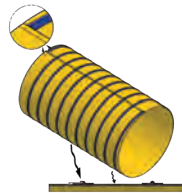

FX-50™

For the Manufacturing of Ducting Tubes

The FX-50 is specifically designed to weld LARGE Flexible reinforced tubing. This machine will weld reinforcement to tubes from a 15-inch diameter to any diameter necessary. The FX-50 can also add a wear strip to the outside.

FX-50™ Seal Types:

The FX-50™ is designed to weld flexible ducting on a larger scale!

M-100 Ventilation Tubes

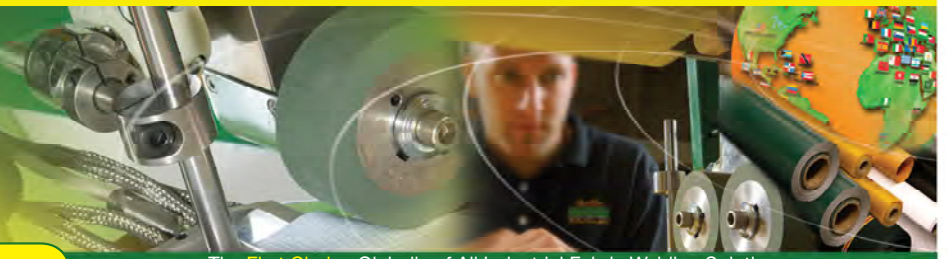

For the Manufacturing of Ventilation Tubes

The M-100 Ventilation Tubes is designed for manufacturing ventilation tubes will weld several panels together into a tube, create t-tape, weld the t-tape onto the large tube, grommet the t-tape and cut the entire welded tube to length simultaneously and fully automated. These systems are designed to greatly increase production while substantially reducing labor costs.

M-100 Ventilation Seal Types:

The M-100 Ventilation Tubes is a completely automated ventilation tube production system.

M-100 Ventilation Tubes For the Manufacturing of Ventilation Tubes

The M-100 Ventilation Tubes is a completely automated ventilation tube production system.

The M-100 Ventilation Tubes is designed for manufacturing ventilation tubes will weld several panels together into a tube, create t-tape, weld the t-tape onto the large tube, grommet the t-tape and cut the entire welded tube to length simultaneously and fully automated. These systems are designed to greatly increase production while substantially reducing labor costs.

M-100 Ventilation Tubes Seal Type:

M-100 Insulation Tape Fully Automated Insulation Tape Manufacturing

The M-100 Insulation Tape is a completely automated production system.

This M-100 system welds two thermoplastic pieces of fabric together with a piece of insulation in between. This system consists of two unwind stands, an M-100 frame with two welding heads, and a rewind system. Both outside edges are welded with a fin or prayer seal simultaneously.

M-100 Insulation Tape Seal Type:
